Water's circle

The fountain could be placed in a city way or in a city garden, and it has the shape of a waterfall, which is falling inside a series of circle, enlightened by inside to create effects between the water and the lights. The fountain could be used by everyone and it is divided in two structures, the fountain and another structure inserted into the fountain with the interlocking's technique. So there's two plans in the middle, one is thinking to filled the bottles and wash your hands, and the other one is just to give an effect to the water. The bottom part is thinking to let animals drink the water falling from above.

Source of plastic: plastic bottles and waste plastic

Type of plastic: ABS

Other Materials Involved: bambù wood and BIO stone

Dimensions: 40x40x125 cm

Already in production?: No

Produced by:

Video presentation of the project:

Did you participate in other contests with the same project?:

no
