The Branched Bench

It is a bench with a soft and sinuous appearance with shapes that recall nature: we can understand this from the backrest which is inspired by the shape of the branches and the veins of the leaves.

The seat has a wavy shape while

the legs continue the ramifications of the backrest. The bench conveys both lightness and elegance.

Source of plastic: Plastic is a major cause of pollution and our project indeed was meant to give light to this problem and find a solution that allow to revive plastic waste. So we thought about designing one bench in recycled plastic that raise awareness on the issue of reuse. In particular, we analyzed the shape of tree branches and leaf veins.

Type of plastic: ABS

Other Materials Involved: The material used is plastic recycled, painted with non-toxic paint.

Dimensions: The Branched Bench is about one meter high and two and a half meters long; the weight is 15 Kg.

Already in production?: No
